

October 24, 2022

Dear Customer:

Over the years, we have experienced a significant amount of shipping damage on “F” style 1 Gallon cans used on Frekote products made in Seabrook.

The current cans are made of thin metal, which is the root cause of shipping damage. Implementing additional countermeasures such as adding dividers and inserts, and other dunnage has not appreciably reduced damage due to shipping and handling of these products.

In our search for an improved robust can, we have been successful in locating and sourcing a significantly better can with thicker walls. We have tested the new cans and have found them to have nearly eliminated the shipping damage, resulting in significant Quality improvements operationally in the Seabrook plant.

Summarizing the benefits of the new can:

- **Thicker metal can walls eliminating Damage in Shipping and Handling**
- **Same dimensions and labeling as the current can**
- **New extendable spout for easy pouring out of the new can**
- **Easily identifiable.....The new can has a red can top, while the current can have a white top**
- **The cans are the same material of construction, only thicker walled.**
- **The manufacturer of the can has received required UN approvals**
- **Product Performance, package compatibility and Shelf Life are not impacted by this package change**
- **Improved Quality in elimination of can damage**

Seabrook will begin shipping Frekote products in the new can beginning December 1, 2022

This will be implemented as a running change.
